Online DoD RFID Compliance Solution with Migration Path Now Available

Brighton, Michigan, March 9, 2007 — Smart Label Solutions LLC, maker of the smartEPC™ suite of applications for Wal-mart's RFID mandate and the Department of Defense (DoD) RFID/UID mandate, announces the release of Quickstart™. Quickstart™ allows DoD suppliers to comply with the RFID mandate with no capital expenditure. The feature rich online service allows customers to create DoD RFID labels with a verification report and have them delivered as quickly as the next day. In addition, Quickstart™ offers an option to automatically transfer the data to Wide Area Work Flow (WAWF) via Smart Label Solutions SFTP account. Once the customer's RFID tag volume reaches a point where it makes sense to have a full blown system on site, Quickstart™ can migrate to smartEPC™ with all existing data in place and little or no training.

"We spent the last year actively marketing our smartEPC™ product to the DoD RFID compliance space," states Jeff Hudson, President of Smart Label Solutions. "Although we had many successful smartEPC™ implementations, we found a large group of suppliers that only needed to supply RFID for one of their many contracts with the DoD. Until all of their contracts renew with the RFID clause, the capital expense for a full blown system did not make sense. Quickstart™ will make it affordable for these suppliers to comply today while giving them a migration path to expand when the volumes dictate."

"Quickstart™ is a natural fit with our existing suite of applications," says Curtis Stackable, VP of Research and Development for Smart Label Solutions. "Our team will continue to develop creative solutions to help the supplier community comply with retail and DoD mandates in the most cost effective manner possible."
