

smartLOGISTICS

Inventory Management Solution

SmartLogistics is an inventory control package developed to enable Barcode Data Collection and inventory management to warehousing and storage areas that do not have these capabilities today. The software, when fully integrated into back end systems, allows error proofing of the Receiving and Picking of inventory items. Suggested put-away locations based on current inventory locations for each part will keep your inventory areas organized. Written in the latest .NET architecture using an SQL database, the user is investing in a robust and scalable solution that is very affordable.

Future-proof Your Investment with Open Systems

Smart Label Solutions **smartLOGISTICS** software suite is built with openness in mind.

- › Multiple hardware vendors supported
- › Integrate with ERP, WMS and other back end business systems like Microsoft Dynamics, Quickbooks, JDE and others
- › .NET Architecture

<i>smartLOGISTICS</i> Feature	<i>smartLOGISTICS</i> Benefit
ERP, WMS and Other Back End Systems Integration	Seamless communication with current systems
Browser Based Management Console	No additional Client fees
Receiving	Error proof receiving using purchase order data
Picking	Error proof picking process against sales order data Incorporating directed picking
Reporting	Leverages Microsoft SQL reporting services
Inventory Moves	Track everyday inventory movements
Inventory & Cycle Counts	Periodically verify inventory accuracy efficiently
Location Labeling	Label your locations using your naming conventions
Inventory Item Labeling	Add barcode labels to inventory items as needed
.Net Architecture	Open development standards
Microsoft SQL Database platform	Industry standard and open database
Mobile Devices	Applications function at the point of use

Web Based User Interface

Intuitive easy to navigate web screens allow you to easily locate and modify inventory information.

All system management is done through the web interface making it easy for any authorized user to access the system from anywhere on the network using just a browser, and eliminating the need for your company to purchase client licenses everywhere you need system management access.

smartLOGISTICS Mobile Client

- Supports any Windows Mobile device from various manufacturers
- Receive, pick, move and cycle count inventory from the mobile computer
- Connects to the server via WIFI

Built on the latest Microsoft Architecture

The **smartLOGISTICS** server module is an ASP.NET web application that controls all of the system functions. The server module utilizes open communications standards like SOAP, XML and HTTP which provides for easier integration and investment protection.

Architecture:

- › Microsoft .NET Platform
- › ASP .NET Web Application
- › SOAP, XML, HTTP

Smart Label Solutions:

- › Data Hosting Services
- › Custom Application Solutions
- › Barcode Data Collection Solutions
- › Service & Support
